

PRODUCT CATALOG

ALUMINIUM EXTRUSION

Aluminum extrusion is a process by which aluminum alloy material is forced through a die with a specific cross-sectional profile. Aluminum extrusion can be likened to squeezing toothpaste from a tube. A powerful ram pushes the aluminum through the die and it emerges from the die opening.

ACCESSORIES FOR ALUMINIUM

When assembling a modular aluminum workstation, accessories play a crucial role in enhancing the functionality, versatility, and efficiency of the workstation. Accessories are additional components or attachments that can be integrated into the workstation system to meet specific requirements and provide added convenience to the users.
